## **Why is it important to clean your animal's ear**

- Routine cleaning for dirty ear canals can be done one or twice a week or as directed by your veterinary surgeon.
- It is important not to 'over-clean' as this can cause discomfort. Clear ear canals do not need to be cleaned.
- Ear canals can be simply cleaned by introducing the cleaning fluid directly into the ear and massaging the ear canals, working debris to the surface. Remember to be gentle.
- Do not use cotton buds in the ear as these could potentially damage the delicate ear drum.
- If you are worried that your pet's ears are sore or that there may be an infection contact your veterinary surgeon for a check-up.
- Finally make ear cleaning fun for your pet! Be sure to give them a big fuss or a treat afterwards so that it becomes an enjoyable experience.

Simple  
and easy  
use

## How to clean ears with Sonotix

1 Fill the ear canal with Sonotix

2 Massage gently for 5 minutes from bottom to top to help loosen and remove the debris

3 Allow pet to shake head

4 Wipe off any excess of product if necessary with a cotton ball

5 Repeat the procedure only if the ear is very dirty
